

I am opposed to the PLC or "broadband on power line" approach being considered in the subject NOI.

As a user of the HF spectrum for voice, data, and CW, I am concerned that additional interference will result from such an approach.

I rely on international broadcasts in this spectrum and,

I am a radio amateur that regularly uses the HF bands for national and international communications.

This approach would degrade or destroy the effectiveness of existing HF communication.

Please do not allow development, experimentation or implementation of the PLC data transmission method.

Thank you, Signed Ken Stovesand - N4OI
